Hope is a feathery thing which perches the
soul. It hardly even stops and continues
singing without any words. It is heard the
sweetest in the Gale. Hope can be heard
in the chillest land and on the strangest
Sea. And hope never asks for a crump
even in extremity.

The content of the poem indicates the difference

between day and night dreamers. The people who

dream in the night wakes up to find that it was

nothing in the morning. But those who dream in

the day with their eyes wide open are hungry

to make that dream come true.

Dear Abrar,

I'm hoping that you are doing well by the grace of the Almighty. I'm also fine. In your last letter you wanted to know about my future plan after passing the HSC Exam. So, I thought why not write about it to you. Well, first of all, I'm getting admitted to a coaching centre from where I will prepare for my university admission exam. I'm planning to crack one of the many engineering universities in the country. So, I'm vowed to work hard for it. In the meanwhile, I'm going to the gym and keeping myself updated with the current affairs of country and abroad. It's because, I'm also thinking about taking my chances at joining the Bangladesh Military. And I'm also trying improve my

conversational english speaking skill as, it will help go
to study abroad in the near future. That's it
for today.

Convey my heartfelt regards to your parents and
love to the younglings;

From,	To,	Stamp
Azward	Abraz

"The Lion and The Mouse"

Once a lion ~~was~~ sleeping in a forest. Suddenly a mouse came there. It was, in fact, playing on a race quite happily and didn't notice the sleeping lion. While running, it accidentally fell on the lion. This woke the lion up. He was fuming with rage and said ~~to~~ "Who dares disturb my sleep?". Then, the lion catches the mouse and holds him in his palm. The mouse ~~to~~ pleads for his life and says "Oh, The mighty king of jungle. Please spare my life and I ~~shall~~ repay it back by assisting you in your trouble." The lion ~~laughed~~ hysterically. He then spared the mouse's life. One day, whilst roaming around the jungle, the lion fell into the hunter's slick trap. He was caged in a net.

He roared and roared, screaming for help but none came. Just when all hope was running out, he saw the mouse coming towards him. The mouse came, he saw and he cut the net and rescued the lion. The lion thanked the mouse for saving his life. After that, they became allies and went on to living a happy life.

Moral of the story: Size doesn't matter. Help can come from unexpected sources.

The pie-chart shows the sources of the USA electricity in 1980.

If we ~~look~~ at the pie-chart we can see that,

In the year 1980, majority of USA's electricity

came ~~from coal~~ ~~natural~~ gases, which covered almost 24% 46%

of the pie. Next in line is natural gases, which

was 24% of the chart. Then comes Hydro-electric

power consisting of 16% of the pie. Oil makes

its place at ~~number four~~ with 12% and, lastly

comes nuclear power with only 2%. This pie-

chart shows that a large amount of electricity

come from fossil fuels. As much convenient as they

are, fossil fuel can run out pretty easily. Not

only that, the use of causes global warming

and all sorts of natural calamities, But on the other hand, nuclear energy which comes in last place is a pretty safe and a green energy source. It not only can generate more energy but can also do it without causing any harm to

the nature. So, I think leaning more on nuclear energy as an electricity source can be

beneficial for all.

Artificial Intelligence

Artificial Intelligence also known for its short form

AI is a man created intelligence consisting of

millions of data structures and patterns. AI is

created by making a machine learn about

different types of data structures, patterns and

algorithms. It was created to help us humans

in our various works. There are a dozen

of AI each working for different purposes

equipped with different features. But the most

common one among them are AI chatbots. AI

chatbots can communicate and converse like a

real human being. Because of it having access to

With a large amount of data, it can answer almost

every question, can do any and solve any

math problems. It is safe to say that AI

chatbots are the ones that revolutionized

Artificial Intelligence. AI has many applications

on human life, from daily lifestyle ^{to} work life

AI can be applied everywhere. One can tell

AI to make a daily routine for them and

It will create a daily routine tailored just for

them. It can also organize a person's daily

chore, set up and iterate schedule etc.

AI has also revolutionized the teaching

and learning sector. AI can solve any

math problem faster than a man can.

Students are using AI as their personal

tutor, to whom they can ask any

problem and get the solution. Teachers

are using AI to ~~eva~~ evaluate students,

creating personalized study materials for

them which will help them grow. Despite it's

merit AI can pose ~~a~~ a great threat to

basic human growth. For that world leaders

and leading researchers have put AI regulations in place to keep it from becoming a threat to humanity.
